# What sets us apart?

Our success is contributed to the longevity of our strong commitment to trust, integrity, honor and mutual respect. Our suppliers are our partners, our employees our greatest asset. The environment is the only one we have. We value, cherish and respect our suppliers, employees and our environment. We strive to continually improve our service to our suppliers while providing an exceptional work experience for our employees and taking care of our environment.

We are geared for volume; we offer strong prices with small margins in an honest and transparent way. Good deals make good partnerships, and our hourly market tracking ensures a top dollar market value.

Our 'ZERO TOLERANCE' policy helps to cut out time consuming unethical traders giving us more time and resources to take care of the serious seller.

We'll assist you in setting up your shipments using national shipping companies, or if we currently run a route near your location, we will be happy to coordinate a place and time to meet.

The converters are shipped in Gaylord boxes, then they are graded.

After the grading process, the converters are cut open....

....and the auto catalyst is removed.

Super-sack bags are then filled and made ready for sampling and

smelting to reclaim the Precious Metals *Platinum, Palladium, and Rhodium.*
